Water Manager: Robbie West

The City of Klamath Falls Water Division has completed their initial assessment for the “**Lead and Copper Service Line Inventory**”, which was due October 16th, 2024. To build the inventory list the division utilized historical distribution maps, as-builts, as well as meter changeout sheets. In addition, the division used a state approved strategic method to physically inspect a random sampling of all unknown service lines in the system. Using all listed methods staff was able to confidently identify all service lines in the system as “**non-lead**”. Staff will continue to perform physical inspections and utilize available records to update the inventory yearly to ensure that no lead service lines are in the system.
